IMPORTANT SAFETY INSTRUCTIONS

SAVE THESE INSTRUCTIONS - This manual contains important instructions that should be followed during installation, operation, and maintenance of the product. Save this manual for future reference.

⚠ This is the safety alert symbol. When you see this symbol on your pump or in this manual, look for one of the following signal words and be alert to the potential for personal injury!

⚠ DANGER indicates a hazard which, if not avoided, *will* result in death or serious injury.

⚠ WARNING indicates a hazard which, if not avoided, *could* result in death or serious injury.

⚠ CAUTION indicates a hazard which, if not avoided, *could* result in minor or moderate injury.

NOTICE addresses practices not related to personal injury.

To avoid serious or fatal personal injury and possible property damage, carefully read and follow the safety instructions.

1. Install pump according to all code requirements.
2. Compare pump nameplate data with desired operating range.
3. Pump only liquids compatible with pump component materials (that is, liquids that will not attack the pump).
4. Make sure plumbing is adequate to handle system pressure.
5. Periodically perform maintenance inspection on pump and system components.
6. Wear safety glasses at all times when working on pumps.

California Proposition 65 Warning

⚠ WARNING This product and related accessories contain chemicals known to the State of California to cause cancer, birth defects or other reproductive harm.

Inspect the Shipment

The vertical multistage centrifugal inline pump has been carefully inspected and packaged to assure safe delivery. Inspect the pump and fittings and report to the carrier any items which are damaged or missing.

Confirm that you have the right pump:

BVMX3 – 15 1.25” FLG EPDM

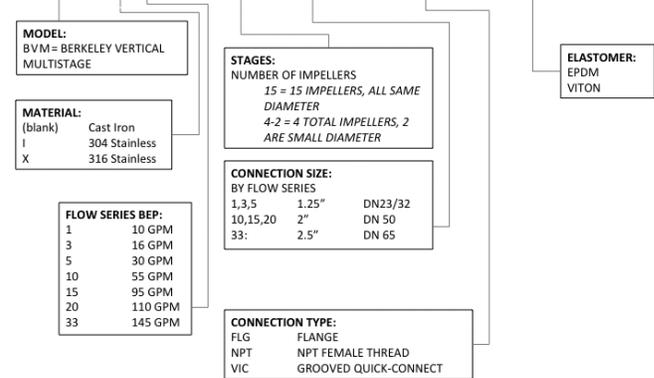

Figure 1 - Model Plate Information

Applications and Operating Ranges.

Berkeley multistage in-line centrifugal pumps are designed for liquid transfer, circulation, and pressure boosting of hot or cold clean water or other thin, non-explosive liquids, not containing solid particles or fibers, which will not chemically attack the pump materials.

Typical applications include:

- Municipal water supply and pressure boosting
- Boiler feed and condensate systems
- Cooling water systems
- Irrigation
- Fire fighting

Maximum Ambient Temperature 104° F(40° C)
 Liquid Temperature Range 5° F to 248° F
 (-15° C to +120° C)

Maximum Permissible Operating Pressure
 Flow Series 1 through 20 360 psi
 Flow Series 33 through 150 435 psi
 Maximum operating pressure = Inlet pressure + maximum pump differential head

Electrical Data: See Motor Nameplate
 Dimensions and Port-to-Port
 Lengths : See pages 20-53

INSTALLATION

⚠ WARNING Risk of electric shock. Can shock, burn or kill. Ground pump motor correctly before connecting to power supply, per article 250-80 of the National Electrical Code (NEC) in the U.S., or the Canadian Electrical Code (CEC), as applicable.

Location

Locate pump in a dry, well ventilated area, not subject to freezing or extreme variations in temperature.

Mount pump a minimum of 6" from any obstruction or hot surface. Install the pump with the motor shaft vertical. Make sure that an adequate supply of cool air reaches the motor cooling fan. Maximum ambient air temperature is 104° F (40° C).

For open systems requiring suction lift, locate the pump as close to the water source as possible.

Foundation

Foundation should be concrete or a similarly rigid foundation to provide a secure, stable mounting base for the pump.

Secure pump to foundation using all bolt holes. Refer to pages 23-53 for bolt plate dimensions. Be sure that all four pads on the base are properly supported.

Shim pump base to make sure that pump is level.

Piping

⚠ WARNING Risk of explosion and scalding. Do not run pump with discharge valve closed; the water in the pump may boil, with risk of explosion and steam burns to anyone near.

If there is any danger of the pump running against a closed discharge valve, install a pressure relief or by-pass valve in the discharge pipe to allow for minimum liquid flow through the pump. Minimum liquid flow through the pump is needed for cooling and lubrication of the pump (See Table I). Run the bypass/relief valve and discharge pipe to a floor drain or a tank for collection.

Suction pipe should be adequately sized (See Table II) and run as straight and as short as possible to keep friction losses to a minimum. Pipes, valves, and fittings must have a pressure rating equal to or greater than the maximum system pressure.

Pressure check the discharge piping as required by codes or local regulations.

"Inlet" and "Outlet" are marked on the pump base to show the direction of the liquid flow through the pump.

Install anti-vibration mountings on either side of the pump if a minimum noise level is desired.

Install isolation valves in both inlet and outlet pipes near the pump (see Figure 2). This allows for removal of pump for service without draining the system and isolation of the pump in case of a flooded suction condition.

Table I – Minimum Pumping Rates

Flow Series	Minimum Pumping Rate
BVM(I/X)1	1.0 GPM
BVM(I/X)3	6.5 GPM
BVM(I/X)5	13 GPM
BVM(I/X)10	25 GPM
BVM(I/X)15	45 GPM
BVM(I/X)20	50 GPM
BVM(I/X)33	80 GPM

Table II – Minimum Suction Pipe Sizes

Flow Series	Minimum Nominal Suction Pipe Size
BVM(I/X)1 BVM(I/X)3 BVM(I/X)5	1.25 inches
BVM(I/X)10 BVM(I/X)15 BVM(I/X)20	2 inches
BVM(I/X)33	2.5 inches

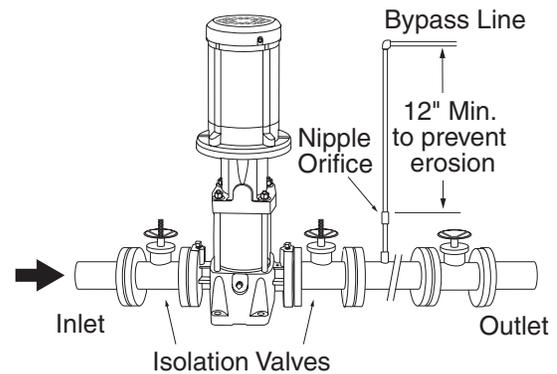

Figure 2 - Bypass required if pump might operate with discharge valve closed. See Table I for minimum required flow through pump to prevent overheating and to ensure lubrication.

If the system pressure is greater than the pump's maximum inlet pressure the limits of the pump can be exceeded if the discharge pressure backs up to the inlet side of the pump. Installation of a check valve in the discharge pipe is recommended to prevent this condition.

Make sure, especially on the inlet side of the pump, that there are no airlocks in the system. See Figure 3 for correct pipe work to avoid airlocks. The suction pipe should be level or slightly rising.

Support all piping independently of the pump so the weight of the piping system does not strain the pump case. Make sure that the expansion and contraction of the piping system from temperature variations cannot put a strain on the pump.

If the system or pump must be drained periodically (especially if the discharge pipe is horizontal or slopes downward away from the pump), install a loop and vacuum valve as shown in Figure 4 to protect the pump

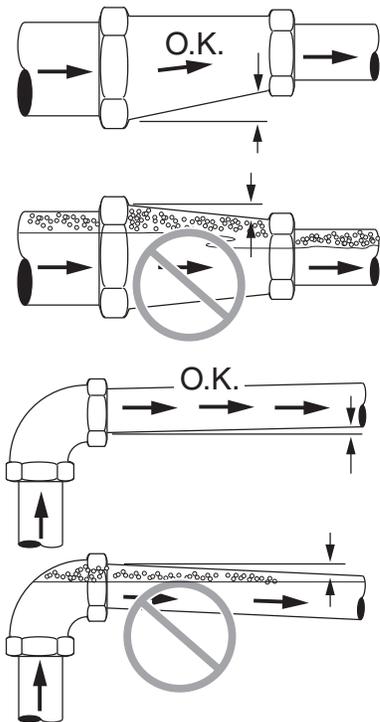

Figure 3 - Install Pipe Correctly to Prevent Air Locks

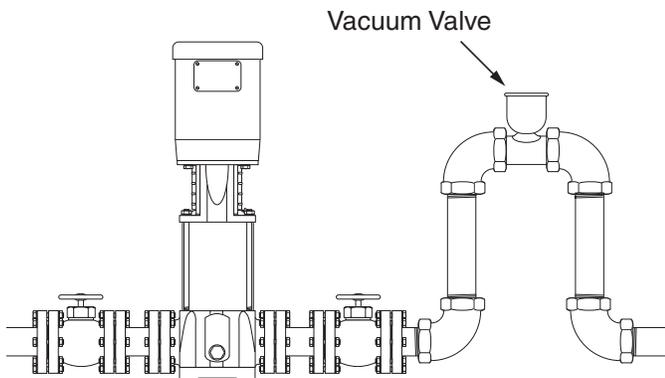

Figure 4 - Loop and Vacuum Valve Installation

against running dry. The highest point of the loop should be at least as high as the lowest point of the motor. This loop/valve combination will allow the pump and the system to be drained independently of one another.

ELECTRICAL

▲WARNING Risk of electric shock. Can shock, burn or kill. All electrical work should be performed by a qualified electrician in accordance with the National Electrical Code and all local codes and regulations. Make sure that the motor voltage, phase, and frequency match the incoming electrical supply. The proper operating voltage and other electrical information can be found on the motor nameplate. These motors are designed to run up to $\pm 10\%$ of the nameplate-rated voltage. The wiring connection diagram can be found on either a plate attached to the motor or on a diagram inside the terminal box cover.

- **If voltage variations are greater than $\pm 10\%$ do not operate the pump.**
- Incorrect voltage can cause fire or serious damage to the motor and voids warranty.
- Ground the pump motor correctly before connecting it to the power supply.
- Follow the wiring instructions when connecting the motor to the power lines.

Position of Terminal Box

To turn the motor so that the terminal box faces the right direction, proceed as follows:

1. Disconnect the power to the pump motor.
2. Remove the coupling guards (use a screwdriver).
3. Remove the couplings.
4. Remove the bolts that fasten the motor to the pump.
5. Turn the motor to the required position (in quarter-turn increments).
6. Follow steps 10–18 under *Motor Replacement*.

Field Wiring

All wiring connections and wiring sizes must meet National Electrical Code and local requirements.

Motor Protection

See the motor nameplate for electrical connection/wiring diagram.

Berkeley pumps must be used with the proper size and type of motor starter to ensure protection against damage from low voltage, phase failure, current imbalances, and overloads. The overload should be sized to trip at the full-load current rating of the motor.

OPERATION

Priming

⚠ WARNING Risk of explosion and scalding. Do not run the pump with the discharge valve closed; the water in the pump may boil, causing risk of explosion and steam burns to anyone nearby.

⚠ WARNING Risk of electric shock. Can shock, burn or kill. Disconnect all power to the pump before servicing or working on the pump. Make sure that the power is locked out and that the pump cannot be accidentally started.

Operation of closed systems or open systems with the liquid level above the pump priming plug:

1. Close the discharge isolating valve and loosen the needle valve located in the assembly in the pump head (Figure 5). Do not remove the needle valve.

⚠ CAUTION Risk of flooding. Can cause personal injury and/or property damage. Watch the direction of the priming plug and make sure that the liquid escaping from it does not injure persons nearby or damage the motor or other components. In hot water installations, pay particular attention to the risk of injury from scalding hot water.

2. Slowly open the isolation valve in the suction pipe until a steady stream of liquid runs out the vent in the priming port.
3. Tighten needle valve to 25 inch-pounds. Completely open isolation valves.

NOTICE: Please turn to *Starting* before proceeding any further.

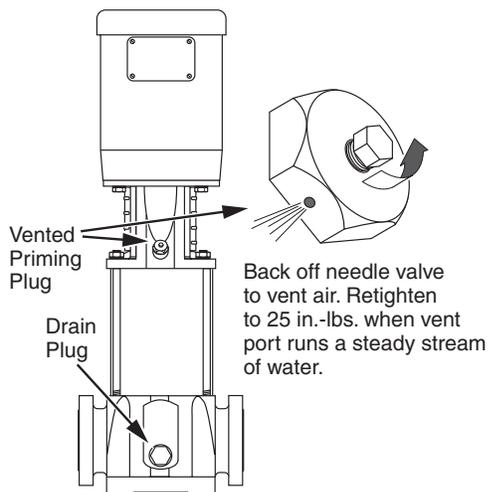

Figure 5 - Priming and Drain Plugs

Operation of open systems with the liquid level below the top of the pump:

NOTICE: The suction pipe requires a check valve or isolation valve.

1. Close the discharge isolation valve.
2. Remove the vented priming plug.
3. Pour liquid through the priming port until the suction pipe and the pump are completely filled with liquid.
4. Replace the vented priming plug and tighten it securely.
5. Repeat steps 1-4 until the pump is primed.

NOTICE: Please turn to *Starting* before proceeding any further.

Checking Direction of Rotation

NOTICE: Do not disconnect the motor from the shaft to check the direction of rotation. If you remove the coupling, then you must adjust the shaft position when you reinstall it. This must be done before starting the pump.

Arrows on the pump head show the correct direction of rotation. When seen from the motor fan, the pump should rotate counterclockwise (↺). For pump motors without a fan remove one of the coupling guards and look at the coupling to determine the direction of rotation. Turn off the pump and replace coupling guard.

NOTICE: Do not check the direction of rotation until the pump has been filled with liquid. See "Priming", at left and above.

1. Switch power off.
2. Remove the coupling guard and rotate the pump shaft to be certain it can turn freely. Replace the coupling guard.
3. Verify that the electrical connections are in accordance with the wiring diagram on the motor.
4. If the fan is visible, turn on and off to verify rotation.
5. To reverse the direction of rotation, first switch OFF the power supply.
6. On three-phase motors, switch 2 of the 3 power leads on the load side of the starter. On single-phase motors, see the connection diagram on the motor nameplate. Change the wiring as indicated.

⚠ WARNING Risk of electric shock. Can shock, burn or kill. Ground the pump motor correctly before connecting to power supply per article 250-80 of National Electrical Code (NEC) in the U.S., or the Canadian Electrical Code (CEC), as applicable.

7. Switch on the power supply and recheck the direction of motor rotation.

Starting

1. If a suction line isolation valve has been installed, check to be sure that it is completely opened.
2. For initial starting, the isolation valve in the discharge pipe should be almost closed.
3. Start the pump.
4. When the piping system has been filled with liquid, slowly open the discharge isolation valve until it is completely open. Opening the valve too fast may result in water hammer in the discharge pipe. If the pump or system start to rattle, the pump is cavitating; to avoid damage to the pump, reduce the flow through the discharge isolation valve until the rattling stops. If this does not give adequate flow for your installation, call your installer or system designer.
5. Record the voltage and amperage of the motor. Adjust the motor overloads if required.
6. If pressure gauges have been installed, check and record operating pressures.
7. Check all controls for proper operation.

Motor Bearings

For the greasing schedule and greasing procedure of the motor bearings follow the motor manufacturers recommendations.

MAINTENANCE

Motor Replacement

The reference numbers [shown as (11) or (88)] refer to the exploded views, Figures 10-13. See the appropriate exploded view for your model series.

⚠ WARNING Risk of electric shock. Can shock, burn or kill. Disconnect all power to the pump before servicing or working on pump. Make sure that power is locked out and that pump cannot be accidentally started.

1. Disconnect the power to the pump motor.
2. Close the nearest suction and discharge valves.
3. Remove the coupling guards (54).
4. Remove the socket head screws (73) and the coupling halves (44) from the shaft (81). See Figure 6.
NOTICE: Socket head screws are metric. See Table III for specific metric driver sizes.
5. If your pump has a shaft pin (72), remove it.
6. Remove the motor bolts (74/92) and flatwashers that hold the motor and the motor stool (36/53) together.
7. Pull the old motor up and off of the motor bracket.
NOTICE: Make a note of the orientation of the conduit box on the motor.
8. Thoroughly clean the surfaces of the mounting flanges on the new motor and the pump end.
9. Install the new motor on the pump with the conduit box in the desired position.
10. Lubricate the motor bolts (74/92) with oil.

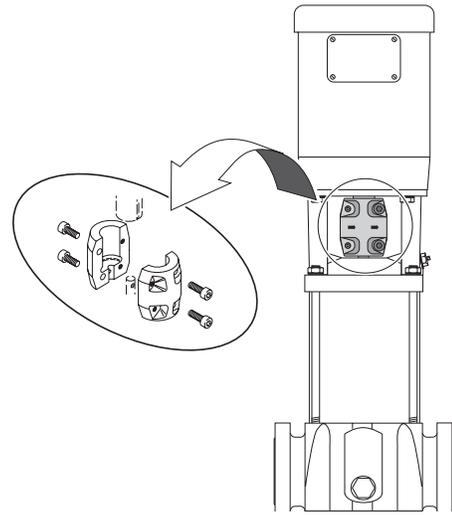

Figure 6 - Remove the Socket Head Screws and the Coupling Halves

11. Reinstall the flatwashers and motor bolts (74/92) that hold the motor and the motor stool (36/53) together, then tighten the bolts evenly and diagonally. See Table III for torque specifications.
12. **BVM(I/X)1-BVM(I/X)20:** Reinstall the shaft pin (72) if your pump has one. Raise the height of the pump shaft by using the shaft pin (72) as a lift point (you may have to put a block under the pin and lift with a flat screwdriver). Insert the stack height adjustment tool (see Figure 7) in below the shaft collar and let the shaft collar rest on it. **BVM(I/X)33:** Pick up the shaft (if necessary, temporarily reinstall the coupling to provide a grip to lift by) and insert the stack height adjustment tool (see Figure 7) below the shaft collar. Let the shaft collar rest on it.

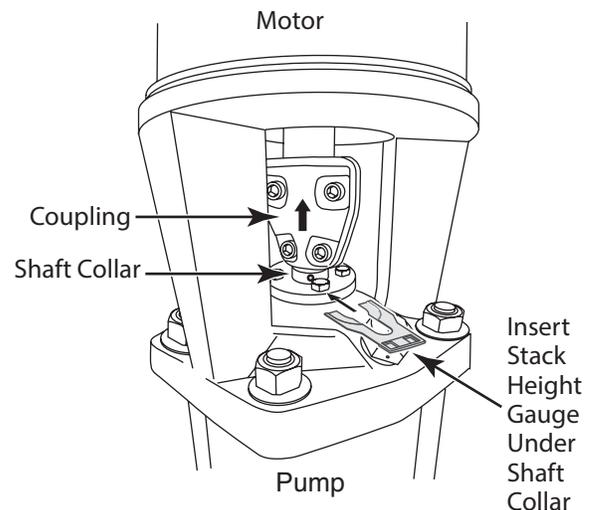

Figure 7 - Using the stack height adjusting tool

13. Reinstall the coupling (43) on the pump and motor shaft. If the pump has a shaft pin, the pin axially locates the pump shaft. If the pump does not have a shaft pin, then set the coupling so that it grips equal lengths of the pump and motor shaft.
14. Tighten the coupling's socket head cap screws (73). **NOTICE:** Torque settings are critical to prevent coupling movement. If the coupling is not tightened to the correct torque, it could slip on the shaft and overheat and damage both the coupling and the shaft. Refer to Table III, for torque specifications. Be sure to tighten the two halves of the coupling evenly (see Figure 8).
15. Remove the stack height adjustment tool and clip it to one of the coupling guards.
16. Rotate the shaft to make sure that there is no interference. After assembly there should be a small gap between the shaft collar and the bracket. If anything rubs, repeat steps 13, 14, and 15 to readjust pump shaft height.
17. Reinstall the coupling guards. **NOTICE:** The guards should be in place before the unit is run.
18. Open the suction and discharge valves. Turn the power back on.

Replacing Mechanical Seal

1. Follow Steps 1-7 under Motor Replacement and then proceed with Step 2 below.
2. Loosen the three set screws in the shaft collar above the mechanical seal and remove the shaft collar.
3. Remove the four retaining bolts (69) that hold down the seal flange and seal.
4. Use a flat screwdriver to pry up the seal flange. Remove the top portion of the seal.
5. Using the three round holes on the top of the shaft sleeve, or notch in flange (see Figure 9), remove the remaining portions of the seal.
6. Clean the seal seat area with a wetted cloth. **NOTICE:** Be sure that you do not scratch, chip, or scar the seal face. Be sure that the seal face is clean before finishing assembly.
7. Wipe a small amount of water onto the O-Ring on the inside of the new seal.

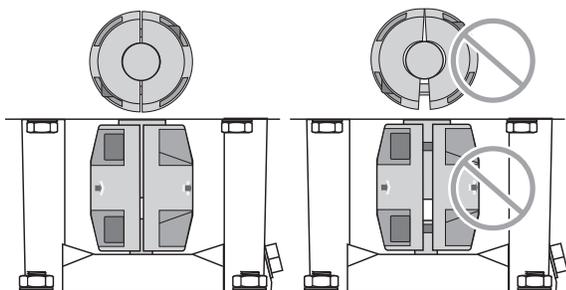

Figure 8 - Make Sure that the coupling halves are evenly tightened

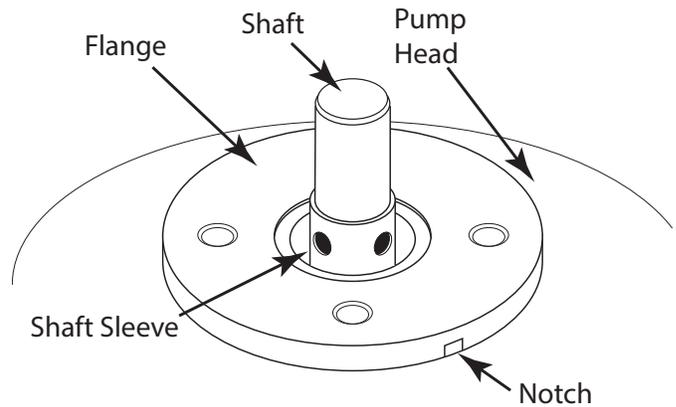

Figure 9

8. Slide the new seal assembly onto the shaft as a single unit.
9. Install the four retaining bolts in the seal flange and tighten them to 3.0 foot-lbs. (4.0 Nm).
10. Follow Steps 8 through 19 under Motor Replacement to reinstall the motor.

Replacing Pump Stack

The reference numbers [shown as (11) or (88)] refer to the exploded views, Figures 10-13. See the appropriate exploded view for your model series.

1. Follow steps 1-7 under Motor Replacement, then proceed with step 2 below.
2. Remove the motor bracket adapter plate (50), if your pump has one.
3. Follow steps 2-5 under Mechanical Seal Replacement and then proceed with Step 3 below.
4. Remove the staybolt nuts (77) and flatwashers (78) from the staybolts (81). Use vicegrips, if necessary, to prevent the staybolts from unscrewing out of the pump base. **NOTICE:** It is not necessary to remove the staybolts when replacing the stack.
5. With the base firmly attached to a solid floor, pull the motor stool (36) or motor stool/pump head assembly (36/53 or 36/56) straight up off the staybolts.
6. Make a note of the orientation of any tabs in the top of the stack assembly, then remove the stack assembly by pulling it straight up.
7. Install the new stack assembly, making sure that the orientation of the tabs matches the orientation of the tabs on the old stack assembly.
8. Replace the stack sleeve O-Ring (82) located in the motor stool (36/53) or pump head (36/56). Make sure that the new O-Ring is evenly seated in the O-Ring groove in the motor stool or pump head.
9. Apply water to the stack sleeve O-Ring in the motor stool/pump head (82) and to the top of the stack sleeve (48).

10. **BVM1–BVM20:** Slide the motor stool (36) over the staybolts (81) and onto the sleeve (48). Slide the pump head (36) over the staybolts onto the stack sleeve (48). Be sure the stack sleeve O-Ring seats in the pump head. Add the staybolt nuts and washers (77,78) and tighten them to torque specifications listed in Table III.

BVM(I/X)1-20: Mount the pump head (56) on the stack sleeve (48). Be sure the stack sleeve O-Ring (82) seats in the groove in the pump head. Follow it with the motor stool (36) which goes over the staybolts (81) and seats on the pump head. Slide the pump head (36) over the staybolts onto the stack sleeve (48). Be sure the stack sleeve O-Ring seats in the pump head. Add the staybolt nuts and washers (77,78) and tighten them to torque specifications listed in Table III.

BVM/BVM(I/X)33-90: Slide the pump head (36) over the staybolts onto the stack sleeve (48). Be sure the stack sleeve O-Ring seats in the pump head. Add the staybolt nuts and washers (77,78) and tighten them

to torque specifications listed in Table III. Place the motor stool (53) on the pump head and fasten it with four pump head bolts (74A). Tighten the pump head bolts to torque specifications given in Table III.

BVM/BVM(X)120-150: Slide the pump head (36) over the staybolts onto the stack sleeve (48). Be sure the stack sleeve O-Ring seats in the pump head. Add the staybolt nuts and washers (77,78) and tighten them to torque specifications listed in Table III. Make sure that the stack can rotate freely. Install the motor stool (53) on the pump head. **NOTICE:** For larger horsepower motors, the motor stool slides over the staybolts and is fastened with a second set of staybolt nuts and washers (77,78), which must be torqued to the specification given in Table III. All 120-150 models: Install the pump head bolts (74A) through the base of the motor stool. Tighten them to the torque specifications given in Table III.

11. Make sure that the stack can rotate freely.
12. Follow Steps 6–10 under Mechanical Seal Replacement.

Table III – Torque Specifications (foot-lbs.) For Cast Iron and Stainless Steel Models

Description	Type of Fastener	Item No.	Size	Torque (Nm)	Torque (ft-lbs)	Flow Series
Shaft Collar Set Screw	Set Screw	none	M5	2.5	1.8	All
Mech Seal Holder Screws	Socket Head Cap Screw	69	M6	4.0	3.0	All
Couplings Bolts	Socket Head Cap Screw	73	M6	13.0	9.6	Varies
			M8	31.0	22.9	Varies
			M10	62.0	45.7	Varies
Pipe Plug	Hex Head	76	M16	35.0	25.8	All
Exhaust Screw	Hex Head	64	M6	35.0	25.8	All
Drain Plug	Hex Head	63	M16	35.0	25.8	All
Motor bolts	Hex Head	74	3/8-16 x 1"	40.7	30.0	Varies
			1/2-13 x 1.25"	47.5	35.0	Varies
			1/2-13 x 1.50"	47.5	35.0	Varies
			1/2-13 x 1.75"	47.5	35.0	Varies
Pump Head/Stool Bolts	Socket Head Cap Screw	74	M10	62.0	45.7	BVM10-BVM150
Staybolt Nut	Hex nut	77	M12	40.0	29.5	BVM1-BVM5
			M16	80.0	59.0	BVM10-BVM20
			M16	110.0	81.1	BVM33
Shaft Locknut	Hex nut	40	M8	18.0	13.3	BVM1-BVM20
		88	M14	31.0	22.9	BVM33
Strap Bolt	Hex nut	70	M8	15.0	11.1	BVM10
Collet Locknut	Hex nut	22	M30	100.0	73.8	BVM33

13. Follow Steps 11–19 under Motor Replacement to reinstall the motor.

⚠ WARNING Risk of explosion and scalding. Do not run pump with discharge valve closed; the water in the pump may boil, causing risk of explosion and steam burns to anyone nearby.

Frequency of Starts and Stops

Check pump cycling frequency and make sure that the pump starts per hour do not exceed the motor manufacturer's specification.

Frost Protection

1. If you do not use your pump during seasons of frost, drain it and add a glycol based antifreeze (50/50 mixture) to avoid damage.

⚠ CAUTION **Risk of flooding.** Can cause personal injury and/or property damage. Watch the direction of the priming plug and make sure that liquid escaping from it does not injure persons nearby or damage the motor or other components. In hot water installations, pay particular attention to the risk of injury from scalding hot water.

2. Upon restart dispose of spent antifreeze properly.

3. Do not replace the drain plug or tighten the priming plug until you put the pump back in service again.

Regular Maintenance Checks

The following checks should be made at regular intervals:

1. The pump meets required performance and is operating smoothly and quietly.
2. There are no leaks.
3. The motor is not overheating.
4. Remove and clean all strainers and filters in the system.
5. Verify amp draw – check motor amperage.
6. Pump wear rings and shaft require no regular maintenance.

TROUBLESHOOTING

▲WARNING Risk of electrical shock and possible unexpected starts. Disconnect all power to the pump before servicing or working on pump. Make sure that power is locked out and that pump cannot be accidentally started.

Problem	Cause
1. Motor does not run when started	A. Power failure
	B. Fuses blown
	C. Motor starter overload has tripped out
	D. Main contacts in motor starter are not making contact or the coil is faulty
	E. Control circuit fuses are defective
	F. Motor is defective
2. Motor starter overload trips out immediately when power supply is switched on	A. One fuse has blown
	B. Contacts in motor overload relay are faulty
	C. Cable connections are loose or faulty
	D. Motor winding is defective
	E. Pump mechanically blocked
	F. Overload setting is too low
3. Motor starter overload trips out occasionally	A. Overload setting is too low
	B. Low voltage at peak times
4. Motor starter has not tripped out but the motor does not run	A. Check 1 A), B), D,) and E)
5. Pump capacity is not constant	A. Pump inlet pressure is too low
	B. Suction pipe/pump partly blocked
	C. Pump is sucking air
6. Pump runs but gives no water	A. Suction pipe/pump blocked
	B. Foot or non-return valve is blocked in closed position
	C. Leakage in suction pipe
	D. Air in suction pipe or pump
	E. Motor rotates in the wrong direction
7. Pump runs backwards when switched off	A. Leakage in suction pipe
	B. Foot or non-return valve is defective
	C. Foot valve is blocked in open or partly open position
	D. Non return valve leaks or is blocked in open or partly open position
	E. Discharge valve is defective
8. Leakage from shaft seal	A. Pump shaft position is incorrect
	B. Shaft seal is defective
9. Noise	A. Cavitation is occurring in the pump
	B. Pump does not rotate freely (That is, there is increased frictional resistance) because of incorrect shaft position

Limited Warranty

BERKELEY warrants to the original consumer purchaser (“Purchaser” or “You”) of the products listed below, that they will be free from defects in material and workmanship for the Warranty Period shown below.

Product	Warranty Period
Water Systems:	
Water Systems Products — jet pumps, small centrifugal pumps, submersible pumps and related accessories	<i>whichever occurs first:</i> 12 months from date of original installation, or 18 months from date of manufacture
Pro-Source™ Composite Tanks	5 years from date of original installation
Pro-Source™ Steel Pressure Tanks	5 years from date of original installation
Pro-Source™ Epoxy-Lined Tanks	3 years from date of original installation
Sump/Sewage/Effluent Products	12 months from date of original installation, or 18 months from date of manufacture
Agricultural/Commercial:	
Centrifugals – close-coupled motor drive, frame mount, SAE mount, engine drive, VMS, SSCX, SSHM, solids handling, submersible solids handling	12 months from date of original installation, or 24 months from date of manufacture
Submersible Turbines, 6” diameter and larger	12 months from date of original installation, or 24 months from date of manufacture

Our limited warranty will not apply to any product that, in our sole judgement, has been subject to negligence, misapplication, improper installation, or improper maintenance. Without limiting the foregoing, operating a three phase motor with single phase power through a phase converter will void the warranty. Note also that three phase motors must be protected by three-leg, ambient compensated, extra-quick trip overload relays of the recommended size or the warranty is void.

Your only remedy, and BERKELEY’s only duty, is that BERKELEY repair or replace defective products (at BERKELEY’s choice). You must pay all labor and shipping charges associated with this warranty and must request warranty service through the installing dealer as soon as a problem is discovered. No request for service will be accepted if received after the Warranty Period has expired. This warranty is not transferable.

BERKELEY SHALL NOT BE LIABLE FOR ANY CONSEQUENTIAL, INCIDENTAL, OR CONTINGENT DAMAGES WHATSOEVER. THE FOREGOING LIMITED WARRANTIES ARE EXCLUSIVE AND IN LIEU OF ALL OTHER EXPRESS AND IMPLIED WARRANTIES, INCLUDING BUT NOT LIMITED TO IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE FOREGOING LIMITED WARRANTIES SHALL NOT EXTEND BEYOND THE DURATION PROVIDED HEREIN.

Some states do not allow the exclusion or limitation of incidental or consequential damages or limitations on the duration of an implied warranty, so the above limitations or exclusions may not apply to You. This warranty gives You specific legal rights and You may also have other rights which vary from state to state.

This Limited Warranty is effective June 1, 2011 and replaces all undated warranties and warranties dated before June 1, 2011.

In the U.S.: BERKELEY, 293 Wright St., Delavan, WI 53115
In Canada: 269 Trillium Dr., Kitchener, Ontario N2G 4W5
